

Control Panel

Cleanliness at the push of a button

The Balena 8000 AP Care can be operated in many different ways to suit the user's needs.

The Control Panel

To start the automatic pre-set sequence of washing and drying it is enough to just press the main button on the side of the WC once - simple but effective.

Infrared Remote

The Infrared Remote

This remote offers a truly touch-free operation as it is activated by a sensor that detects movement and starts the automatic sequence of washing and drying. It includes remote flushing of the WC.

The Remote Control

The remote control is ideal for adjusting the standard functions to match the individual needs of each user. It allows all settings to be saved under 3 different profiles and includes a button for remote flushing.

All shower toilet functions only operate when the seat sensor detects the presence of a user.

The Balena 8000 AP Care shower toilet has been specifically developed to improve the quality of life for the elderly and disabled people who have difficulty using a conventional WC.

The Balena 8000 AP Care shower toilet combines all the functions of a conventional WC and bidet with the comfort of warm air drying and odour extraction.

For many elderly and disabled people using the toilet can be difficult and sometimes requires assistance. Limited mobility can therefore turn

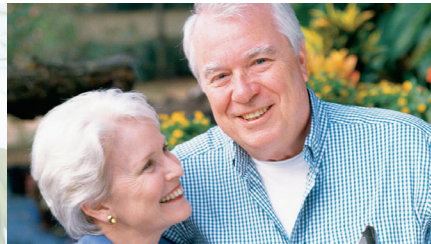

that simple task into an every day challenge. The Balena 8000 AP care allows most users to regain their independence and privacy by being a virtually hands free toilet. Fitted at a height to suit the user's preference, the Balena 8000 AP Care shower toilet offers a variety of functions to

ensure a feeling of freshness and cleanliness after use. The floor standing toilet features a special strengthened seat that is ideal for side transfer and is tested to 400kg. An optional soft seat has been designed for additional comfort.

The Balena 8000 AP Care shower toilet complies with the requirements of the UK Water Supply Regulations

Balena 8000 AP Care

The Oscillating and Pulsating Shower

The shower arm extends from its protected position and a gentle spray of warm water washes thoroughly while gradually cooling down for a refreshing feeling. Temperature and spray intensity can be adjusted to the user's liking. The shower arm features a separate lady shower for an even gentler wash.

The Dryer

The wash is followed by a gentle flow of drying air. The almost noiseless dryer is optimised to achieve drying within minutes. A true paper free experience.

The Cleaning System

After each use the shower arm retracts into its protective sleeve where it is immersed in a solution of fresh water and disinfectant. After 1 minute it is rinsed for a spotlessly clean result.
